

OrganoTex®

Spray-On Textile Waterproofing

- 🌿 Restores water and dirt repellent properties
- 🌿 Maintains the material's breathability
- 🌿 Biobased, readily biodegradable, and PFAS-free
- 🌿 Eco-labelled with OEKO-TEX Eco Passport and USDA Certified Biobased Product

500 ml: Article No. 103951
5L refill: Article No. 102759

Spray-On Textile Waterproofing is a textile waterproofing for all types of textiles. It improves the water and dirt repellent properties of the fabric, and extends the life of the garment by protecting the fibres and restoring their ability to repel water. Maintains the material's breathability, colour and feel, as the impregnation does not form a film on the surface but binds to the textile fibre. Eco-labelled with OEKO-TEX Eco Passport and USDA Certified Biobased Product.

Applications

Waterproofing spray to restore or improve the water repellence on all sport and outdoor garments in polyester, polyamide, cottons, wool, or blends. Such as rainwear, skiwear, softshells, hiking pants, overcoats, workpants, and textile gloves. Also applicable on items like backpacks, tents, canopies, and horse blankets. Compatible with all membranes like Gore-Tex® or SympaTex®.

Sustainability

This product is based on nature's own chemistry. It is free from fluorocarbons (PFC/PFAS), fossil-based polymers, or synthetic waxes. Just biobased and readily biodegradable according to OECD 301F.

Contents

Water, natural fatty acids, and surfactants.

How to use

- 1) Wash and rinse the garment without softener (preferably with OrganoTex BioCare Sport Textile Wash). Let dry.
 - 2) Place the dry item on a well-protected work surface. Spray from 20 cm, making sure the fabric gets evenly wet. Repeat after 1 minute if dry areas are visible.
 - 3) Remove excess product by rubbing with a dry cloth or sponge, leaving no traces.
 - 4) For best result dry in a tumble dryer or drying cabinet, if care instructions allow it.
- If you air dry your garment, white drying stains may occur. These can easily be removed using a hairdryer or an iron on low heat. Heat allows the product to absorb into the fabric.

OrganoTex®

Other information

Coverage: Sufficient for 4 items or 10 sqm of textile. Shelf life: 12 months, opened packaging. Storage: Frost-free, out of reach of children. Recycling: Sorted as plastic (rPET bottle).

When is it time to re-waterproof?

Once you notice that water drops no longer bead and run off the outer fabric of your raincoat, shell jacket or other functional outdoor gear, the factory-applied water repellent treatment, termed DWR*, has been washed out. A wet outer fabric reduces garment breathability. This means that despite a good membrane that is designed to keep you dry and "breathes" at the same time, the garment will feel heavy and cold, and you can even feel moisture on the inside. By washing and reproofing your garments and equipment regularly, you maintain their function and extend their useful life.

*Durable Water Repellent.

Made Green Inside by OrganoClick®. OrganoTex® is developed and manufactured in Sweden by OrganoClick AB, according to ISO 14001 and ISO 9001. OrganoClick is a Swedish greentech company that with green chemistry imitate nature's solutions and creates products and materials of the future, based on biodegradable and fossil-free raw materials. For its green innovations, OrganoClick has won a number of awards.
